
P-spline detrending on one benchmark crop (seed 0, uniform, Delaunay, cap radius 2, n = 3543)
a cubic B-spline basis: 42 bumps on 40 knots (|)
$B_j(d)$
distance to border d
b one bump (B_{21}): 4 cubics, smooth at the knots (:)
cubic piece 1
cubic piece 2
cubic piece 3
cubic piece 4
zero outside
distance to border d
c betweenness (y clipped at 99.5th pct)
betweenness
spline, smallest λ=1e-02 (edf 41.5)
spline, GCV choice λ=4e-01 (edf 34.6)
spline, largest λ=1e+08 (edf 2.0)
BOSPERRUS PiecewiseLinearFit
distance to border d
d betweenness: GCV picks λ=4e-01, edf 34.6
GCV / min GCV
effective df
λ
e closeness (y clipped at 99.5th pct)
closeness
spline, smallest λ=1e-02 (edf 41.5)
spline, GCV choice λ=3e+01 (edf 17.7)
spline, largest λ=1e+08 (edf 2.0)
BOSPERRUS PiecewiseLinearFit
distance to border d
f closeness: GCV picks λ=3e+01, edf 17.7
GCV / min GCV
effective df
